

PlateTronic Ultima Installed Inground May 2001

We have been using a PlateTronic Brake Steering and Suspension tester for approximately 8 years and it has proved to be instrumental in helping us achieve high levels of customer satisfaction and retention. Needless to say, those achievements have enhanced our bottom line performance.

The PlateTronic was quickly incorporated into our daily service routine. Every vehicle entering the workshop is automatically checked for brake and alignment. Checking alignment on new cars during pre-delivery is quick, easy and accurate. The automatically printed test report provides black and white proof to your customers that work needs to be, or has been, carried out.

The PlateTronic/Safe-T-Stop staff have always been available to answer any questions on demand. They are friendly, helpful and offer good advice on how to maximise profits using the machine.

The PlateTronic quickly paid for itself and I rate it a very successful investment. If you are seeking to generate sell-ups and simultaneously increase customer satisfaction – invest in a PlateTronic!
