

## PlateTronic Ultima Installed In-Ground December 2002 & February 2006

The Kloster Group services several franchises including Ford, BMW, Honda, Nissan and Daihatsu to name a few and have just installed their second Safe-T-Stop. The Safe-T-Stop is used for every vehicle that passes through the pre-delivery department and the same procedure has been adopted for the service department.

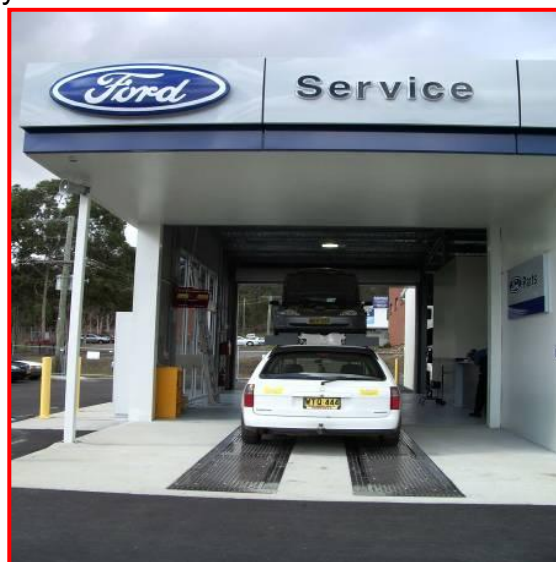

Craig Welsh, the Group Service Manager, acknowledges the real benefits of his installations:

“Not only is Safe-T-Stop earning additional income for the workshop it is also saving a lot of time and money when it comes to road tests. The service department performs approximately 180 registration inspections per month and the Safe-T-Stop has brought about two important ‘saving’ factors. The big benefit here is inspectors’ time previously taken to carry out the RTA required brake test. On our local roads this was taking up to 20 minutes to perform; now with our Safe-T-Stop the vehicle does not leave the workshop.

**We are definitely saving money on wages but have gained many hours of extra productive labour!”**

So for the Kloster Group the Safe-T-Stop is a winner earning additional sales and saving on mechanics’ time and wages.
