

PlateTronic Ultima Installed Above Ground March 1997

Since its installation it has been a godsend for us in both profitability and productivity. There is stiff competition from other service chains who advertise heavily, so we have to look at every angle we can to maintain a viable service operation. One way we do this is by running every car that comes through the door over the Safe-T-Stop, and it's surprising how many brake, shock and alignment jobs we pick up as a result.

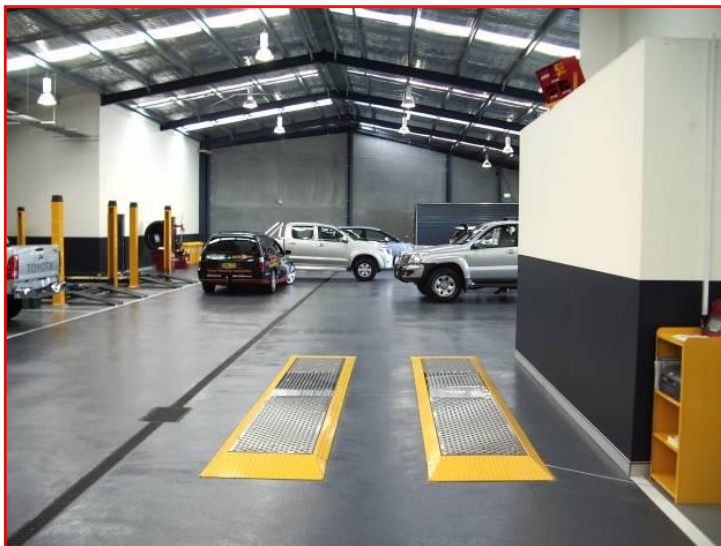

Our machine is installed in the workshop which is three floors up from street level. With the Safe-T-Stop we don't have to take customers cars out on the street at all for brake testing, registration inspections and other related items.

The Safe-T-Stop identifies that about 25% of the approximately 80 cars tested every day requires attention. It is also a big time saver for us with the machine giving measurements in a matter of seconds

Safe-T-Stop has been a huge cost saving item for our workshop and I would rate it a very successful investment for every dealership.
