

## PlateTronic Ultima Installed In Ground October 2007

Ralph D'Silva Holden invests a lot of money in equipment for their workshop and tries to purchase a new piece of equipment each month.

Our newest addition to the workshop is the PlateTronic. This device digitally checks toe-in, suspension, brake forces, wheel alignment, handbrake efficiency and works as a weighbridge.

This gives a clear indication of what work the car needs with the process only taking a few minutes, whereas prior to the device, the same process would have taken approximately 45 minutes.
