

## PlateTronic Ultima Installed: April 2002

Situated in a very busy area, this service station, tyre franchise and mechanical repair centre installed the Safe-T-Stop test system in 2002.

"We have to come to rely on the Safe-T-Stop test system for rego checks and regular service work. I don't use it as often for shock testing but it comes in handy when a customer needs something more convincing than your say-so that his shock absorbers need changing".

"Besides being a real time saver, it brings us work we wouldn't otherwise get by identifying problems, particularly brake faults that just don't show up using less sophisticated equipment. The machine is so accurate that, with practice, on some models, we find we can read off the amount the toe is out, relate that to the correction needed, re-test it and come out spot on without ever going near the wheel aligner".

The machine performed over 1700 tests within the first four months of operation.

*"Safe-T-Stop helps to build a professional image and makes it easier to sell needed repairs, it has definitely helped my business and I'm happy with it".*
