

**PlateTronic Ultima  
Installed In ground  
June 2004**

**EXTRA** work began to flow in within a week of the installation of a PlateTronic Ultima Brake Steering and Suspension Test Track. I had known about the Safe-T-Stop product for some time but was hesitant about an installation because of available space in the workshop. The expertise of the Safe-T-Stop team showed us just how it could work in our situation.

The results showed through immediately. In the first week it brought us extra brake and wheel alignment work which we would not have found with our previous 'on the road' brake test method. This guarantees us an excellent financial return on our investment. Since the installation of the Safe-T-Stop we have not looked back.

**The simplicity of operation and its diagnostic precision is outstanding. It has certainly transformed our day to day operation and exceeded my wildest expectations. I highly recommend Safe-T-Stop to the industry.....Ted Lumsden**
