

PlateTronic Ultima

Installed In ground

June 2004

We are using the Safe-T-Stop test on every car regardless of what it has been booked in for, as the customer drops off the vehicle, we recommend a \$20 test.

So far I believe only one person has declined our offer. This in itself is a good money spinner for the business. The biggest advantage that I see however, is the elimination of the time consuming and dangerous road brake test as needed for the vehicle safety check system (RTA Pink and Blue slips). The Safe-T-Stop test is much safer, faster and the customers like the extra care that we take.

The Safe-T-Stop has also brought us extra brake and alignment work which would have gone undetected with the old method of road testing.

"I can highly recommend the system to everyone in the industry. It has met and exceeded all my expectations." Please feel free to contact me any time.
