

# PlateTronic Ultima

Installed: June 2005

Grant was completely blown away when I was introduced to the PlateTronic and I immediately ordered one. His reaction was why so quick to say yes? My answer is obvious, "I could see it was going to make money for the company". "Why Not?" the purchase of the PlateTronic for our company is all win win as far as I can see.

From an aesthetic point of view, you have a piece of equipment that does not take up space, instead uses it wisely and gives an appearance that brings questions every day by customers and visitors of "what is it?" which gives us the chance to explain the many applications of the PlateTronic & the benefits to them.

It is an attractive piece of equipment that draws dollars into the company each day. How much easier is it to not take the customers car out on the road for brake test. What an incentive for customers service to save customers petrol, gain their trust by offering computer proof of their cars safety. Again a win win situation.

It looks good, Works easily without complications, Gives precise accurate data to show customers what is necessary for their vehicles safety and better ride. Best of all it makes MONEY.

**We are proud of our PlateTronic and it has been a top investment.**
