

## PlateTronic PitStop 'WS' Installed Above Ground June 2006

All vehicles booked in each day for work are automatically tested on the PlateTronic first! We know immediately if any attention is required on a customers' vehicle. From these test results we are up-selling wheel alignments and tyres and picking up extra brake and shock absorber work. The biggest advantage for us is using the system for pre delivery of Fiat vehicles which have been fitted with camper bodies. We needed to be able to check the wheel alignment and brake forces on each of these vehicles.

We probably check at least six of these each day. The PlateTronic saves us a lot of valuable time - the alternatives to this system were far too time consuming and not as accurate.

**We recommend PlateTronic & Safe-T-Stop to every workshop owner.**
